DIAGNOSIS

Moderate-to-severe atopic dermatitis (ICD-10 L20.9), inadequately controlled on topical therapy.

Rx: Dupixent (dupilumab) 300 mg / 2 mL prefilled pen

Sig: Inject 600 mg subcutaneously (two 300 mg injections) as a single loading dose on day 1, then inject 300 mg subcutaneously every 2 weeks.

Dispense: 1 carton (2 prefilled pens) — 28-day supply
Refills: 2

Prior therapy on file: medium- and high-potency topical corticosteroids and topical calcineurin inhibitor (tacrolimus) with inadequate control.
